ASSESSMENT OF TRAINEE'S PROGRESS

The purpose of assessment is to measure the progress of training. The trainee requires certification from the trainer that the targets of training has been reached to be able to proceed from year to year.

The process should provide sufficient information for use in the assessment of the trainee.

1. Formative Assessment

Formative assessment assesses the strengths and weaknesses of the trainee at the beginning of a training period to help to produce a planned program of training.

2. <u>Summative Assessment</u>

Summative assessment examines the evidences from the log books and personal supervision at the end of the training period to evaluate whether the training plan has been realised.
